1 PLEASE SEE STANDARD/BESPOKE FRAME DATA SHEETS OR INSTALLATION SHEETS FOR FRAME BUILD INSTRUCTIONS/GUIDELINES

Design load based on maximum allowable deflection on cross members when distributed across the bar. Big Foot's Technical Office is able to analyse deflection and bending stress based on specific load locations and therefore higher loads may be suitable.
 Allowable foot pressure will be subject to roof build-up, typically detailed by a structural engineer. Cross bar spacings are adjustable to accommodate various unit sizes.

Working conditions: Suitable for internal or external applications in temperatures between -40°C to +80°C

Installation and application considerations should include health, safety and environmental needs, regulations and standards, codes of practice, climate conditions, installation location, product orientation, evaluation of the roof structure, composition, surface and condition, ancillary and complimentary products and materials. Big Foot Systems recommend that all rooftop products are handled and installed by suitably qualified persons. All scheme designs are based on the use of Big Foot Systems' products and materials only.
